

Your branding will be displayed here.

Add a valuable product to your family safety line-up and increase sales, revenue and customer LTV.

SafePath Home can become an important part of your VAS strategy and allow you to attract new subscribers with an innovative and easy way to secure their home network and all devices used in their home.

Our white-label solution is a cloud-managed router agent that is router agnostic and integrates with any 5G modem and broadband router. All devices connected to the router can be managed. Security filtering, anti-phishing and safe browsing features add an extra layer of protection for consumers and additional opportunity for you to market a robust solution.

All the Controls in Just **One Simple App**

Customize from a comprehensive list of functions made for real-world families and scenarios.

Increase ARPU & LTV per subscriber. Create genuine subscriber value to create trusted a relationship with consumers, rather than a simply transactional, price-based relationship.

Reduce risk by choosing a partner who understands the complexities of working with top tier carriers.

We protect people, not just devices. SafePath provides simple app-based management for families to identify, secure and manage all connected devices, including assigning usage rules to each device depending on the family member who uses it.
